

AMCER

ADVANCED MONITORING AND COORDINATION OF EU R&D POLICIES AT REGIONAL LEVEL

Targeted Analysis 2013/2/18

Regional report - TUSCANY
Annex to (Draft) Final Report | Version 28/09/2012

This report presents the interim results of a Targeted Analysis conducted within the framework of the ESPON 2013 Programme, partly financed by the European Regional Development Fund.

The partnership behind the ESPON Programme consists of the EU Commission and the Member States of the EU27, plus Iceland, Liechtenstein, Norway and Switzerland. Each partner is represented in the ESPON Monitoring Committee.

This report does not necessarily reflect the opinion of the members of the Monitoring Committee.

Information on the ESPON Programme and projects can be found on www.espon.eu

The web site provides the possibility to download and examine the most recent documents produced by finalised and ongoing ESPON projects.

This basic report exists only in an electronic version.

Synthesis of the territorial and R&D system

Tuscany's regional GDP per capita is above the Italian and the European mean. The region is shaped by small-scale businesses with little research capabilities, organised in industrial districts. However, there are sectoral changes occurring, with modern industries developing. Nevertheless, research activities are mostly due to the public sector. Indicators of the RDTI system show that Tuscany cannot achieve national and EU average values.

The Tuscan economy exhibits some intra-regional disparities as indicated through the coefficient of variation of several indicators stated in Table 3. The economically weaker regions which are below the Tuscan average are Massa-Carrara and Pistoia to the north and the north-east, respectively, Arezzo to the east, Grosseto to the south, and Livorno to the west. Particularly weak is the region Massa-Carrara. The stronger regions are all located around the economic centre Firenze (Florence). Except of the region Siena which is situated to the south of Florence, all economically powerful regions are located to the north or northwest of Florence. Nevertheless, in general, it is noticeable that the distribution of wealth does not vary excessively among the regions. Much more unevenly distributed are growth, unemployment and population dynamics. Surprisingly, the economically weaker regions show the highest growth figures. Here, most outstanding is the region Grosseto, followed by Massa-Carrara and Livorno. Regarding the unemployment among the regions, it could be observed that especially Massa-Carrara has a particularly high unemployment rate, followed by Prato and Lucca. All other regions have quite similar, low unemployment figures (around 5%). Although, the regional population development is in general negative, comparatively high growth figures can be found in the north-eastern regions; whereas the north-western regions have the lowest figures (cf. EUROSTAT 2011).

Intra-regional socio-economic disparities in Tuscany (selected Indicators)

Coefficient of variation of GDP per capita 2008 (in %)	Coefficient of variation of the yearly average GDP per capita growth rate 1998-08 (in %)	Coefficient of variation of the unemployment rate 2009 (in %)	Coefficient of variation of the population dynamics 2002-10 (in %)
8.27	24.79	31.62	26.74

Remark: disparity calculations based on NUTS-3 level data

(Source: own creation and calculations; based on data from EUROSTAT 2011)

The main R&D sectors are in the fields of radar, space, and laser technologies, ICT research, as well as biotechnology and life sciences. These research fields are high-tech-oriented and mostly dominated by the public sphere. The business sector plays a rather subordinated role. Finally, the weaknesses of the private sector in terms of RTDI activities partly explain the steadily erosion of the region's international competitiveness in its traditional industrial sectors (cf. COLETTI 2007).

The innovativeness of the Tuscany region, measured by the number of patents registered at the EPO, is below the national and European figures. In 2007, employment in R&D sector was equivalent to 6.7% of the overall Italian R&D personnel. The R&D personnel per 1,000 employees amounted to 9.2. This figure almost corresponds with the Italian standard (9.1), but it is below EU average (11.0). The number of R&D public employees is 17.7% of the total. The main differences with the national average are in the greatest number of people within the university, highlighting the role of universities in R&D, and small business involvement (cf. EUROSTAT 2011).

In 2007, Tuscany had the 8th largest per capita spending on R&D among the Italian regions, and a R&D intensity of 1.01%, thus being far below both the national (1.78%) and the EU-27 average (1.85%) compared to the rest of Italy. The Tuscan R&D productivity amounts to 0.26, thus being below-average compared to the Italian standard (0.31) and to EU average (0.27) (cf. EUROSTAT 2011).

Impact evaluation

Main findings

The following section analyses the research profile of the region by considering the capability to attract research funding in the Seventh Framework Program and the characteristics of the network generated by the programs. Moreover, we also consider the employment profile of the Region in the period 2004-2009, by paying particular attention to knowledge intensive and research dynamic sectors, as well as the patents produced in the region in the period 2002-2007.

As specified in the methodological section, it is not possible to assess the impact of European funding on the region. Nevertheless, programs, patenting and employment represents different and complementary stages in which research activity is developed and exploited. Thus, by using this data, it is possible to i) assess the coherence existing at the regional level among these different phases and ii) identify the most promising sectors.

Tuscany region is highly attractive of FP 7 funds, when compared to the national and European average, both in terms of number of projects and the amount of funds attracted. The provinces of Florence and Pisa are by large the most attractive. The participants are mostly Higher Education Institutions (55%), followed by private for profit (25%) and research organizations (18%). The region is particularly attractive in the themes "Health", "ICT", "Nanosciences, Nanotechnologies, Materials and new Production Technologies", "Energy", "Space" and "Socio-economic sciences and humanities". Most partners are located in Germany (14,8%), United Kingdom (12,2%) and France (10,0%). The most important organizations in the regional FP7 network are the universities of Florence, Pisa and Siena, while a very important subject in terms of projects led, the European University Institute (EUI), is not embedded in the regional network.

The region is mostly specialized in medium knowledge intensive sectors, which sum up 52% of the employed, and which have grown 6 thousands units in the considered period. The region is weakly specialized in High knowledge intensive sectors (9,5% of regional employees), and strongly specialized in low knowledge intensive sectors (38%), both compared to European and Italian averages. Nevertheless, the formers have grown in the period (+ 3'805 units, +6,6%), where the latter have decreased (-4'091, -2.3%), suggesting a slow but relevant shift towards more knowledge intensive economy, and in particular in "Information Technology" (+2'119), "Financial services" (+1'428) and "Pharmaceuticals (+739).

The patenting activity is remarkable in Chemistry and some fields of the Mechanical Engineering, mostly due to the presence of Siemens.

In sum, the region is strong in terms of research potential but more integration is needed of a pivotal actor, such as the EUI. In terms of employment there is a promising trend towards knowledge intensive sectors, and in particular there is a potential of integration between highly attractive sectors in research and growing economic sectors of strong specialization: i) research in "Health" with "Pharmaceuticals" sectors ii) ICT and iii) "Nanoscience" research with sectors in "Chemistry products" and "Construction materials".

General statement of the regional participation in the FP7

Headquarter effect

The headquarter effect analysis revealed 71 ingoing participations in the region, and 14 outgoing participations. No headquarter effect was identified for 89% of regional participations. Most of the ingoing participations were subtracted from Roma (57 participations). Outgoing participations were added to a number of regions including Milano (3 participations), Messina (2 participations) and Roma (3 participations).

The majority of ingoing participations came from Research Organisations (67%) and Private Research Organisations (30%). Outgoing participations are also evenly divided between both of these groups of actors.

Rate of participation of the region in the FP 7

Regional actors in Tuscany accounted for a total of 648 participations in FP7, 128 coordinations and 205mln€ in EC funding (10%, 12% and 11% respectively of the national total). The weight of the region in total national FP7 funding (11%) is considerably higher than its weight in the gross domestic expenditure on R&D (7%). During the 2007 – 2011 period, Tuscany received a yearly average of 41€mln year in FP7 financing, representing approximately 3% of the region's yearly R&D effort (1.2bn€ in R&D).

Overall, the rate of participation, the leadership rate¹ and the contribution received are superior to the European average and the Italian standard (Table 1).

Table 1 –Participation in the FP 7: comparison with country and European average

	TUSCANY	ITALY	EUROPE
leadership rate	20%	17%	19%
collaborations per 100.000 population	16.20	10.45	13.9
coordination per 100.000 population	3.20	1.74	2.6
€ contribution per inhabitant	53	31	44.4
average funding per project	317'290	293'724	318255

Distribution of funding at infra-regional level

The majority of regional participations and coordinations are located in Firenze (42% and 50% respectively), followed by Pisa (37% and 37%) and Siena (11% and 10%). As seen in the following table, the infra-regional distribution of FP7 funding is roughly equal to that of participations and coordinations. Firenze and Pisa account for 77% of FP7 funding in the region (37% and 40% respectively). Siena comes in third with 15% of the overall FP7 funding in the region.

¹ It represents an estimation of the strength of the regional actors, it is given by the ratio between the number of projects in which the regional actors play the role of coordinator and the number of projects in which the regional actors are in the position of partner.

Figure 1: EC contribution distribution within the region

Distribution of funding by participant type

There are significant differences in the structure of participation between the regional and national level as illustrated by the following figures. The share of Higher of Secondary Education Establishments (HES) in Tuscany is considerably higher than in the rest of the country (55% vs. 36%). On the other hand the share of Research Organisations in Tuscany is lower than in Italy (18% vs. 32%).

Figure 2: Participation typology: a comparison between regional and national level

At the regional level, private organisations (commercial and non-profit) account for 39% of participations, compared to 61% for public organisations (commercial and non-profit). At the national level, the share between both types of organisations is even (49% vs. 51%). The following figure presents the distribution of FP7 funding among private and public organisations.

Figure 2B: Distribution of participations according to legal type: a comparison between regional and national level

In terms of FP7 funding, Higher of Secondary Education establishments tend to outperform other types of participants. At the regional level, this group accounted for 50% of participations, while receiving 55% of the total FP7 regional funding. Private Commercial Organisations on the other hand account for 31% of participations, while benefiting from 25% of the total regional FP7 funding.

Distribution of funding by participant type at infra-regional level

The distribution of FP7 funding by participant type at the infra-regional level varies considerably. When looking at the top three territories, the structure of funding between Firenze and Sienna is similar with approximately half of funding going to Higher of Secondary Education establishments. In Siena however, the share of funding going to Private Commercial organisations is stronger than in the two other territories (39% vs. 20% in average). Private commercial organisations tend to receive the highest shares of funding in territories with lower participation rates.

Figure 3 Distribution of funding by type of participant at the infra-regional level

SMES' participation in FP7

During the 2007-2011 period, SMEs in Tuscany accounted for 129 participations in FP7 projects and 30mln€ in funding (11% of the national total in both cases). This is similar to the regional share of overall participations in Italy (11% - see above). All SME participations were generated by private commercial SMEs (100%).

The following figure presents the infra-regional distribution of SME funding in FP7. SMEs in Firenze and Pisa account for 66% of total SME funding in the region (30% and 36% respectively).

Figure 4: EC contribution for SMEs within the region

Distribution of funding by programme and by theme

COOPERATION programs represent the largest share of funding (139mil) and projects (447), followed by IDEAS (30 mil, 28 projects), PEOPLE - Marie Curie actions (19,5 mil, 86 projects,) and CAPACITIES (16 mil and 81 projects). In terms of thematic specialization within the COOPERATION program, the themes attracting more funding are *Information and communication technologies* (36%), *Health* (23%) and *Nanosciences* (10%). The relative weight of each thematic area largely reflects the amount of funding pre-allocated by the European Union to each Theme. The comparison with country and European attractiveness of funds per inhabitant provides a better insight as to the regional scientific specialization²: Tuscany is more attractive in almost all types of programs, and particularly in Health, Socio-economic sciences, Energy and ICT.

A more detailed description of the thematic specialization in the FP 7 is presented in section 2.4.

Table 2 – Thematic distribution of projects and funding

num	PROG SPEC	Theme	nbr	REGION		Attractiveness compared (contribution)	
				EC contribution		COUNTRY	EU

² A ratio above or below 1 points out a higher/lower attractiveness.

participations in the field of Health, while Pisa displays a high level of specialisation in the Information and Communication Technologies sub-theme when compared to the regional and national averages.

Figure 5: Infra-regional distribution of participations by COOPERATION sub-theme (top three participants)

Networking: collaboration in the FP 7

Main partner countries of the region

Regional actors tend to cooperate mostly with other organizations outside the region. Partners in the region count around 9%, nationals 10%, whereas 81% are located in other European regions. The most important countries in terms of collaborations are Germany and United Kingdom; whereas if single regions are considered, the most important are Ile de France, Baden-Württemberg and London (Table).

Table 3 – Spatial distribution of collaborations

Partner country	n	% of total
DE	850	14.8%
UK	701	12.2%
FR	573	10.0%
IT	570	9.9%
ES	444	7.7%
NL	306	5.3%

⁴ For a definition of these measure see the methodological section.

9	Fondazione Stella Maris	0.03	CONSORZIO INTERUNIVERSITARIO RISONANZE MAGNETICHE DI METALLOPROTEINE PARAMAGNETICHE	160	LABORATORIO EUROPEO DI SPETTROSCOPIE NON LINEARI	18
10	ATAF SPA	0.02	SMARTEX S.R.L.	148	ALTA RICERCA E SVILUPPO IN BIOTECNOLOGIE SRLU	16

Main actors in the region in terms of leading collaboration

The three main actors in terms of leading collaboration and partnerships are shown in the following table. What is striking is that a very important organization in terms of project led, e.g. the European University Institute, is very weakly embedded in the regional (and even national) network of collaboration in FP 7. This can be explained by its peculiar history and mission, which is precisely to be a prototypical European Higher Education Institution. However, it remains rather surprising that there are no FP 7 collaboration with other high standing and reputed HEIs like those present in Tuscany.

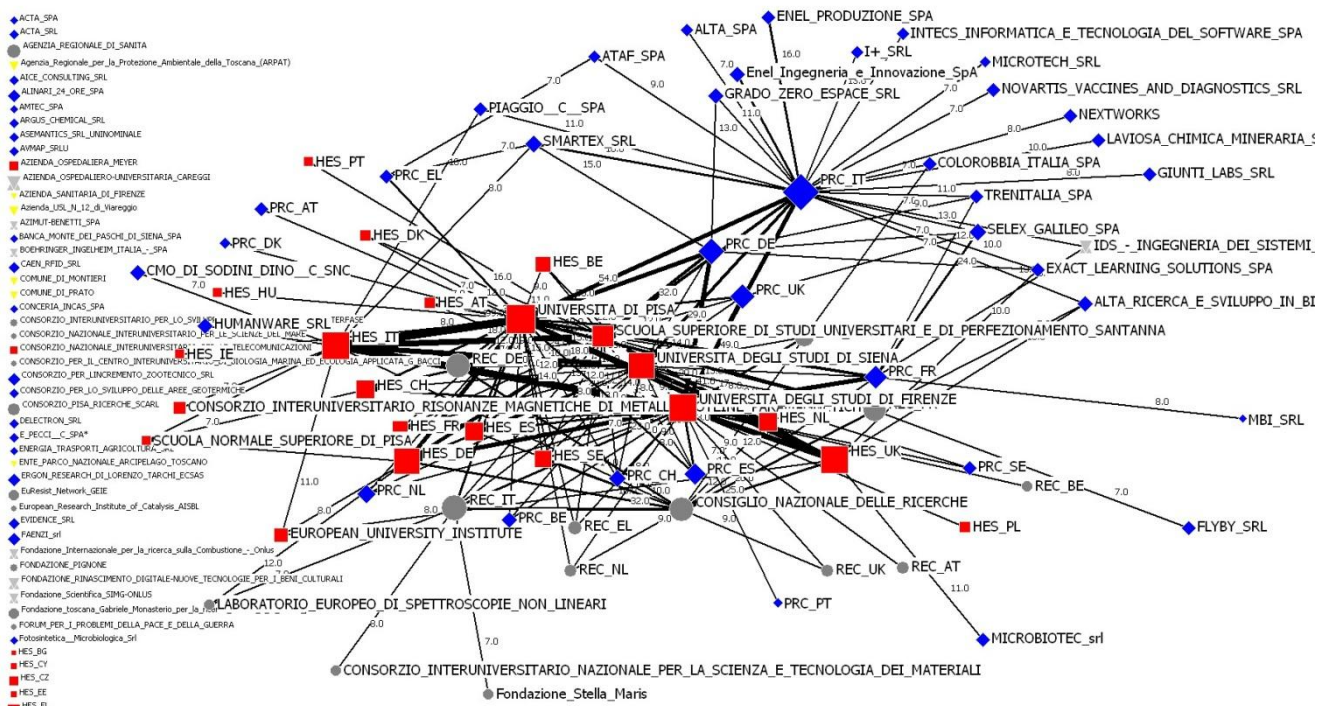

Table 5 – Top three organizations for projects led and participation as partner

Type	leader	n° as leader	location of partners		
			region	country	EU
HES	EUROPEAN UNIVERSITY INSTITUTE	35		1	53
HES	UNIVERSITA DI PISA	17	8	1	68
HES	SCUOLA SUPERIORE DI STUDI UNIVERSITARI E DI PERFEZIONAMENTO SANT'ANNA	12	8		80

	leader	n° as partner	location of leaders		
			region	country	EU
HES	UNIVERSITA DEGLI STUDI DI FIRENZE	74	3	10	61
HES	UNIVERSITA DI PISA	60	1	8	51
HES	UNIVERSITA' DEGLI STUDI DI SIENA	35	6	7	22

The following Social Network Analysis reveals the links between the main research players in the region and their partners in Europe. European partners are not displayed individually, but have instead been regrouped by type of organisation and country of origin. The shape of the nodes indicates the type of organisation represented (circles = research organisations, squares = higher education establishments, rhombus = private commercial organisations, triangles = other). The figure only displays the most important collaboration patterns, while excluding collaborations that are too weak to be significant⁵. The size of the nodes indicates the importance of the player in terms of centrality (number of participations linking them to other partners); and the width of lines represents the intensity of collaboration between the partners represented in the figure.

⁵ This has been determined using a minimum value of frequency of collaborations (>6).

Outputs – employment and patenting in the region

Employment

In this section we examine the distribution of employment in the region across sectors with special attention on identifying sectors where the region has a particular specialisation and/or where there are trends of growth and decline in employment. Figure 9 makes a basic breakdown of employment into sectors that can be classified as ‘high’, ‘medium’ and ‘low’ knowledge and technology intensive using the Eurostat and OECD’s classification of sectors into technology and knowledge intensive groups (see Annex 1). Further, Table 6 shows figures on employment growth and relative specialisation with respect to Italy and Europe for each of these broad groupings of sectors.

Figure 9 - Share of regional employment 2009

Table 6 –Employment and specialization (2009)

	Share of regional employment 2009	variation in the share of employment 2009-2004 ⁶	Employment Tuscany 2009 - 2004	Specialization with respect to Europe (2009) ⁷	Specialization with respect to Italy (2009) ⁸
high tech sectors	9.57%	6.61%	3805.00	0.58	0.91
medium tech sectors	52.20%	1.94%	6102.00	0.87	0.80
low tech sectors	38.23%	-2.27%	-4091.00	1.63	1.56

Employment in the region is dominated by medium tech sectors (52%), with low and high technology sectors accounting for 38% and 10% of employment respectively. Medium and high tech sectors has grown and in low sectors has decreased. The specialisation figures tell the most interesting story because they show how the region is positioned relative to Italy and Europe. The region is relatively less specialised in medium and high tech sectors than Europe and Italy and more specialised in low tech sectors with respect to both Italy and Europe. In Table 7 this analysis is continued sector-by-sector, with sectors ranked in terms of their share of regional employment (in 2009).

⁶ The variation in the share employments has been calculated as: (n° employees in the region in 2009 – n° employees in the region in 2004)/ (n° employees in the region in the year 2004)

⁷ Specialization index with respect to Europe shows whether the region concentrates more or less employment in a certain sector(s) than the European average being 1 this average.

⁸ *Ibid* with respect to Italy

Table 7 – Employment specialization by sector and Knowledge intensity (2009)

	Share of regional employment 2009	Employment 2009 - 2004	Specialization with respect to Europe (2009)	Specialization with respect to Italy(2009)	Technology and knowledge intensity

The detail of the previous table can be also found in the following figures, in which we can see the absolute employment growth (y axis), the relative weight on the regional total employed (x axis) and the regional specialization with respects to Europe (the size of the bubbles).

Figure 9 shows that “IT” is rather small but strongly growing, “Pharmaceuticals” and “Financial services” are sectors that are growing at medium rate. “Education and knowledge creation” is declining.

Figure 9 – High tech and knowledge sectors: evolution 2004- 2009

With regards to medium tech, “Transportation and logistics” and “Construction” are growing sectors that account a high share of the regional employment. The figure also shows a strongly declining sector, “Business services”, in which the region is not highly specialised.

Figure 10 – Medium tech and knowledge sectors: evolution 2004- 2009

Among low tech sectors “Construction” is large and has grown. We can also appreciate some declining sectors as “Jewellery and precious metals” or “Footwear”. The region is highly specialised in the sector “Leather products”, which is stable in terms of employment.

Figure 11 – Low tech and knowledge sectors: evolution 2004- 2009

Patents

Table 8 and figures 12 and 13 show the degree of specialization by sector of patenting, for EPO applications from 2002 to 2007. Patents are regrouped by domain and sub-field. Fractional counting is used for distributing patents across fields.

Tuscany clearly emerges as specialized in Mechanical Engineering, whereas in the other sector the patenting activity is rather modest. Table 10 shows that this specialization is largely due to one important actor -Siemens.

Table 8 – patents by domain and sub-field

Annex 1 - Regional Research and technological specialisation in FP7

Context

FP7 allocates a total of EUR 32 413 million to the Cooperation specific programme. This funding is mainly aimed at supporting cooperation between universities, industry, research centres and public authorities through collaborative research projects. As of October 2011, 3 725 projects were funded through the FP7 cooperation programme representing a total of 14.5€bn.

The FP7 cooperation programme covers 11 themes (Cf. [Box 1](#)) which themselves cover a number of research areas. For the purposes of this study, 188 research areas have been selected in order to perform a regional specialization analysis of each theme.

Box 1 The 11 themes of the FP7 cooperation programme (and the number of research areas for each of them)

- Health (13 research areas)
- Food, Agriculture, and Biotechnology (17 research areas)
- Information and Communication Technologies (12 research areas)
- Nanosciences, Nanotechnologies, Materials and new Production Technologies (16 research areas)
- Energy (8 research areas)
- Environment (including Climate Change) (9 research areas)
- Transport
 - Aeronautics (17 research areas)
 - Surface transport (15 research areas)
- Socio-economic sciences and Humanities (18 research areas)
- Space (5 research areas)
- Security (7 research areas)

Methodological aspects

The specialization analysis aims to establish regional profiles based on thematic participation in the cooperation programme of FP7. The principle of the specialization analysis is to compare, within a theme, the budget breakdown into research areas between the European, national and regional levels.

The perimeter of the analysis only concerns research activities. In order to improve the relevance of the specialization analysis, cross-cutting activities, support actions to improve international collaborations, to promote SMEs or for NCP activities are not taken into account.

The specialization analysis is conditioned by the creation of a clean and reliable regional monitoring tool which takes into account headquarter effects. This was done during as part of the second component of the AMCER, which allowed validating the FP participations of each of the nine regions covered by the project.

The specialization analysis has been carried out for each theme of the cooperation programme. As an underlying hypothesis, we consider there is no asymmetry of information within a theme. This means that we consider national and regional stakeholders to be equally informed about all the research areas and funding opportunities covered in the theme.

In order to avoid the appearance of a mass effect of some research areas against others, the share (weight) of the area within the theme is not considered in the specialization profile. Instead, the European profile is considered as the baseline (Base 100) for regional and national comparisons. The specialization profile is established by measuring the spread between the EU baseline and national or regional EC funding distribution among the research areas.

In other words, this methodology allows identifying which research areas are over-represented and under-represented among all research areas. This provides information regarding the preferences of national and regional research communities in terms of priority research areas. It should be taken into account however, that the analysis does not consider the possible existing competition between European, national and regional funding opportunities at the stakeholder level.

Remarks on the specialisation indexes

The analysis does not constitute a performance indicator. Instead, it presents the differences in terms of distribution of funding among research areas at the national and regional level, compared to the FP standard, and regardless of the total funding weight of each research area. A comparison between the national profile and the EU profile illustrates the national and regional specialization trends. A comparison can also be carried out between national and regional specialization profiles, allowing to know if the regional specialization profile follows the national profile. The difference between profiles can be unlighted by national or regional experts aware of the territorial.

In order to identify areas of specialization, readers must identify the specialization index provided for each research area. If the 'specialisation index' is above the European 100 base, it can be stated that the region or country is specialized in that particular research area. On the other hand, if the specialization index stands below 100, the area is underrepresented and there is no indication of specialization in this area.

For each theme covered by the FP7 cooperation programme, the three following sets of information are provided:

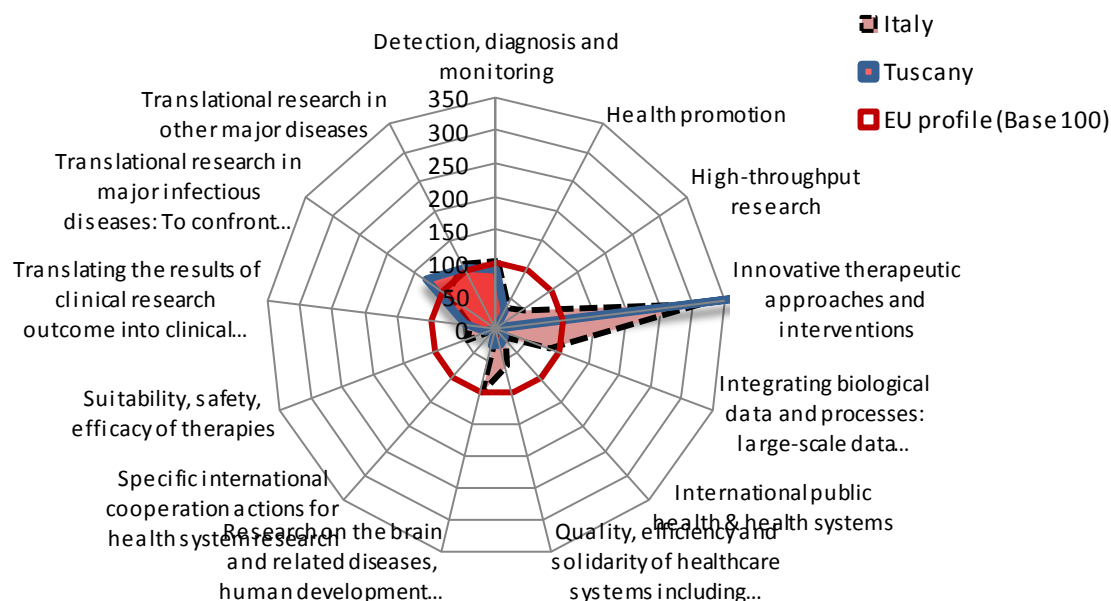

- i) The overall EU budget distribution by research area
- ii) The specialisation profile at the national and regional level, providing a picture of specialisation trends for the two levels. A comparison between the two levels can give information on regional specialisation trends (and highlight strategic initiatives taken at regional level).
- iii) The ranking of research areas at the national and regional levels, according their specialisation scores. The table ranks the research areas according to their specialization score (in base 100) at the national and regional level (left and right column respectively). If the score is above 100, the area is over represented in comparison to the European standard, providing an indication on the specialization trend of the country or the region.

Health

Table 1 Budget breakdown in research areas at the FP cooperation specific-programme level

Rk	Research area	%
1	Translational research in other major diseases	21.6%
2	Translational research in major infectious diseases: To confront major threats to public health	19.1%
3	Integrating biological data and processes: large-scale data gathering, systems biology	17.6%
4	Innovative therapeutic approaches and interventions	10.0%
5	Research on the brain and related diseases, human development and ageing	8.3%
6	Detection, diagnosis and monitoring	6.7%
7	High-throughput research	4.0%
8	Translating the results of clinical research outcome into clinical practice including better use of medicines, and appropriate use of behavioural and organisational interventions and new health therapies and technologies	2.9%
9	International public health & health systems	2.6%
10	Quality, efficiency and solidarity of healthcare systems including transitional health systems	2.6%
11	Health promotion	2.1%
12	Suitability, safety, efficacy of therapies	1.3%
13	Specific international cooperation actions for health system research	1.1%

Figure 6 Specialisation profiles of Italy and Tuscany

The following table ranks the research areas according to their specialization score (in base 100) at the national and regional level (left and right column respectively). If the score is above 100, the area is over represented in comparison to the European standard, providing an indication on the specialization trend of the country or the region.

Annex 2 – FP7 participation scoreboard

This section covers all the indicators produced for the FP7 after validation of the list of participations and contains the following parts:

- i. Headquarter analysis
- ii. Main regional indicators
- iii. Intraregional indicators
- iv. International cooperation

Headquarter analysis

This section presents the results of the headquarter effect analysis for the focused region. The following table presents number of modified participations of the region, after elimination of the existing headquarter effect. The total number of participations in the region is estimated by adding the total number of participations with no headquarter effect, to the ingoing participations (participations previously attributed to an outside region⁹, but now attributed to the focused region).

Table 23 Overall result of the Headquarter analysis

<i>Type of participation</i>	<i>Nbr of participations</i>
(1) Nbr of participation with no headquarter effect	577
(2) Nbr of ingoing participations	71
(3) Nbr of outgoing participations	14
Total nbr of participations (1)+(2)	648

The following table presents a breakdown of the previous table by geographical origin of participations. The second and third columns indicate the NUTS II territory from which the participation is added or subtracted. In the case of incoming participations, the focused region¹⁰ gains a participation, while the impacted region loses one. The opposite is true of outgoing participations.

Table 24 Participation localisation detail (ingoing participations, outgoing participations and static participations)

<i>Participation flow</i>	<i>Regions with participations to subtract</i>	<i>Regions with participation to add</i>	<i>Number of participation concerned</i>	<i>Total</i>	<i>%</i>

Total	71	100,0%	14	100,0%	577	100,0%

Regional indicators

This section presents a set of indicators allowing to compare and characterise the participation of the region in FP7, in light of national indicators. It also presents the distribution of EC funding at an infra-regional level (N-1 if the focus region is considered as N).

Toscana in the FP7

The following table gives an overview of the weight of the region at national level in terms of number of participations, number of coordinations and volume of funding received. It allows to compare regional figures (and their weight at the national level), to national figures (and their weight at the European level).

Table 26 Share of the region at national level

	Toscana	IT	FP	% in Toscana in IT	% in IT in FP
Nbr of participations in projects	648	6272	69719	10,3%	9,0%
Nbr of coordinations	128	1046	12929	12,2%	8,1%
EC contribution	205 603 675	1 842 235 327	22 188 391 959	11,2%	8,3%

Participant Typology

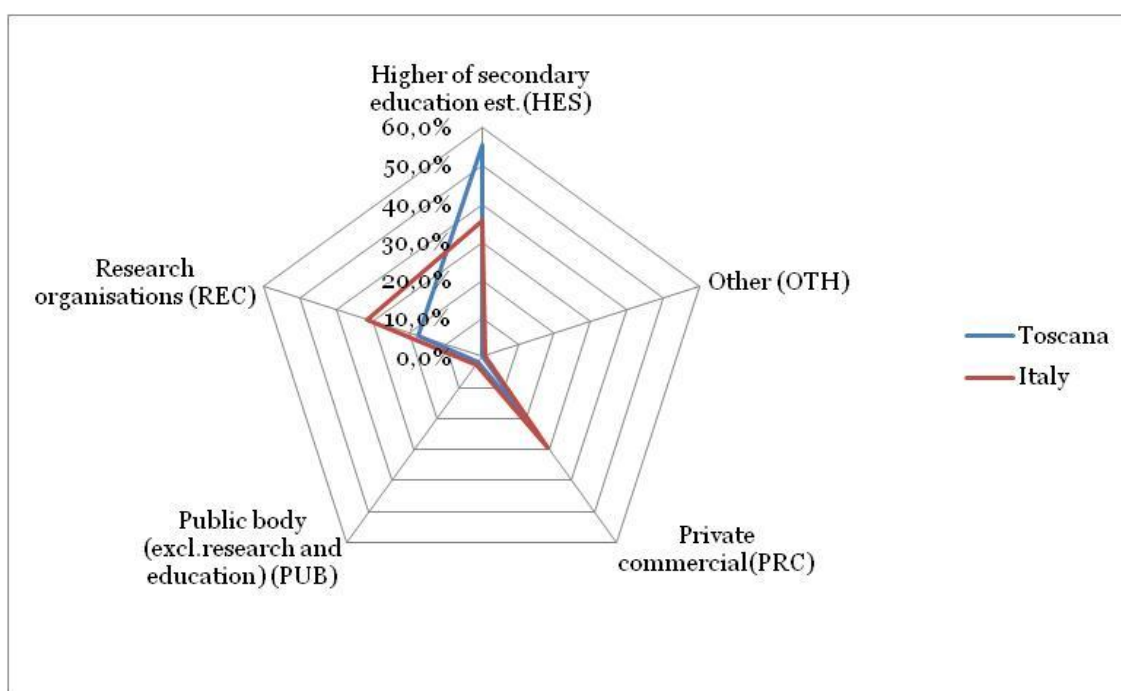

The following table presents the distribution of participations, coordinations and EC contributions according to the different types of participants. A comparison of the distribution of participants between the regional and national level allows to identify the particularities of the focused region.

Table 27 Participation typology-comparison between regional and national level

	Toscana				ITALY			
	Nbr of participations in projects	Nbr of coordinations	EC contribution (mln)	%	Nbr of participations in projects	Nbr of coordinations	EC contribution (mln)	%
Higher of secondary education est.(HES)	322	89,0	114	55,4%	2077	490	655,6	35,6%
Other (OTH)	3		0	0,1%	118	17	20,9	1,1%
Private commercial(PRC)	203	16,0	51	24,9%	2061	182	540,9	29,4%

Regional participation among themes and activities of the programme

This section aims at providing information regarding the specialisation of the regions according to participations across FP7 themes. The level of specialisation of the region can be measured by comparing the levels of participation for each theme to the national and European averages.

Table 31 Participations among FP7 themes and activities-comparison of the distribution at Programme level, national level and regional level

Intraregional indicators

This section presents an overview the participation of infra-regional territories in FP7.

The following table presents a general overview of the distribution of participations, coordinations and EC contribution within the region (at Nuts n-1). The higher concentration of participation within specific territories usually reflects the presence of a stronger number of research organisations.

Table 32 distribution of the funded participations and EC contribution within the territory

International cooperation

This section aims at giving an overview of the main partners and collaboration themes of the focused region at the European level. The following indicators have been calculated on the basis of all projects including at least one participant from the focused region.

The following table presents the partner regions of the focused region.

Table 13 Partner regions

Partner regions	nb participations	% of total
Ile de France	301	5,2%
Baden-Württemberg	181	3,1%
London	180	3,1%
Bayern	164	2,9%
Nordrhein-Westfalen	150	2,6%
Comunidad de Madrid	139	2,4%
Lombardia	135	2,3%
Lazio	133	2,3%
Catalana	119	2,1%
Attiki	117	2,0%
Vlaams Gewest	115	2,0%
South East England	106	1,8%
RÉGION DE BRUXELLES-CAPITALE / BRUSSELS HOOFDSTEDE	88	1,5%
Arr. Halle-Vilvoorde	83	1,4%
East of England	81	1,4%

The table below presents the main partner organisations of the focused region.

Table 35 Partner organisations

Partner organisations	nb participations	% of total
CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE	62	1,1%
FRAUNHOFER-GESELLSCHAFT ZUR FOERDERUNG DER ANGEWANDTEN FORSCHUNG E.V	48	0,8%
MAX PLANCK GESELLSCHAFT ZUR FOERDERUNG DER WISSENSCHAFTEN E.V.	36	0,6%
IMPERIAL COLLEGE OF SCIENCE, TECHNOLOGY AND MEDICINE	33	0,6%
KATHOLIEKE UNIVERSITEIT LEUVEN	30	0,5%
CONSIGLIO NAZIONALE DELLE RICERCHE	30	0,5%
UNIVERSITY COLLEGE LONDON	30	0,5%
JRC -JOINT RESEARCH CENTRE- EUROPEAN COMMISSION	29	0,5%
COMMISSARIAT A L ENERGIE ATOMIQUE ET AUX ENERGIES ALTERNATIVES	28	0,5%
Karlsruher Institut fuer Technologie	27	0,5%
Eidgenössische Technische Hochschule Zürich	26	0,5%
DEUTSCHES ZENTRUM FUER LUFT - UND RAUMFAHRT EV	25	0,4%
UNIVERSITAET STUTTGART	25	0,4%
ECOLE POLYTECHNIQUE FEDERALE DE LAUSANNE	24	0,4%
THE CHANCELLOR, MASTERS AND SCHOLARS OF THE UNIVERSITY OF CAMBRIDGE	24	0,4%

The following table provides the most frequent European coordinators of participants from the focused region in FP7.

Table 36 The main coordinators of regional participants

FREQUENT COORDINATORS	Nb coordinations
MAX PLANCK GESELLSCHAFT ZUR FOERDERUNG DER WISSENSCHAFTEN E.V.	5
KATHOLIEKE UNIVERSITEIT LEUVEN	5
THE UNIVERSITY OF BIRMINGHAM	5
CONSIGLIO NAZIONALE DELLE RICERCHE	5
FRAUNHOFER-GESELLSCHAFT ZUR FOERDERUNG DER ANGEWANDTEN FORSCHUNG E.V	5
ERASMUS UNIVERSITAIR MEDISCH CENTRUM ROTTERDAM	4
CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE	4
CHALMERS TEKNISKA HOEGSKOLA AB	3
AGENCIA ESTATAL CONSEJO SUPERIOR DE INVESTIGACIONES CIENTIFICAS	3

I general information	ERDF allocated	ERDF comitted
Total in euros :	0,00 €	232 193 199,00 €
Innovation and research axis only (n°1) :	0,00 €	70 449 294,41 €
Total projects co-funded :		?
Innovation and research axis only (n°1) :		?

II Distribution of ErDF fundings within areas related	-		
--	---	--	--

to research and innovation				
Themes	FOI codes	Measures	EC contrib.	EC contrib.
RTDI and linked activities	1	R&TD activities in research centres :		0,00 €
	2	R&TD infrastructure and centres of competence in a specific technology :		8 579 297,20 €
	5	Advanced support services for firms and groups of firms		4 134 987,51 €
	7	Investment in firms directly linked to research and innovation (...):		23 510 703,09 €
	74	Developing human potential in the field of research and innovation, in particular through post-graduate studies (...):		0,00 €
Innovation support for SMEs	3	Technology transfer and improvement of cooperation networks (...):		5 413 760,22 €
	4	Assistance to R&TD, particularly in SMEs (including access to R&TD services in research centres):		30 064 385,84 €
	6	Assistance to SMEs for the promotion of environmentally-friendly products and production processes (...):		0,00 €
	9	Other measures to stimulate research and innovation and entrepreneurship in SMEs :		15 543 809,92 €
	14	Services and applications for SMEs (e-commerce, education and training, networking, etc.):		0,00 €
	15	Other measures for improving access to and efficient use of ICT by SMEs :		0,00 €
ICT and related services	11	Information and communication technologies (...):		2 385 360,86 €
	12	Information and communication technologies (TEN-ICT):		0,00 €
	13	Services and applications for citizens (e-health, e-government, e-learning, e-inclusion, etc.):		0,00 €
Other	8	Other investment in firms :		0,00 €

IV Impact and output (innovation and research only) :			Amount foreseen	Amount realised
Unit	Type of indicators			
Number	Output	1 - Jobs created	3418	544

Number	Output	12 - Number of additional population covered by broadband access	400000	280000
Number	Output	13 - Number of transport projects	3	0
Number	Output	17 - km of new railroads	8.8	0
Number	Output	19 - km of reconstructed railroads	13	0
Number	Output	22 - Additional population served with improved urban transport	1235942	1004032
Number	Output	23 - Number of renewable energy projects	310	43
-	Impact	24 - Additional capacity of renewable energy production	113	0
-	Impact	29 - Area rehabilitated (km2)	0.05	0
Number	Impact	3 - Jobs created for women	1078	251
-	Impact	30 - Reduction greenhouse emissions (CO2 and equivalents, kt)	220.84	50.22
Number	Impact	31 - Number of risk prevention projects	32	63
%	Impact	39 - Number of projects ensuring sustainability and improving the attractiveness of towns and cities	18	11
Number	Impact	4 - Number of RTD projects	90	462
N/A	Impact	5 - Number of cooperation project enterprises-research institutions	100	58
Number	Impact	7 - Number of direct investment aid projects to SME	2900	1310
Number	Impact	9 - Jobs created (gross, full time equivalent)	1138	498
